

WALID ABDULKADIR

COMPUTER SCIENCE STUDENT & FULL-STACK DEVELOPER

📍 Addis Ababa, Ethiopia 📞 +251 951 968 887 ✉️ yesufabdulkadir942@gmail.com
🔗 github.com/walidabdulkadir 💼 linkedin.com/in/walid-abdulkadir

PROFESSIONAL SUMMARY

Motivated Computer Science student with hands-on experience building full-stack web applications, RESTful APIs, and responsive, interactive user interfaces. Proficient in modern JavaScript, React.js, Node.js, and relational database systems. A fast learner and collaborative problem solver who bridges academic theory with clean, scalable, engineering solutions to address real-world business challenges.

PROJECTS

Student Management System

Node.js, Express.js, MySQL, Bootstrap

Full-Stack Web Application

[Project Link](#)

- Architected a robust full-stack records platform implementing complete CRUD operations and integrated auto-schema initialization.
- Optimized Express.js middleware routing and resolved complex environment configuration and local network port conflicts to ensure high application uptime.
- Designed a clean, fully responsive Bootstrap frontend utilizing dynamic conditional rendering and comprehensive client-side form validation.

Employee Management System

HTML5, CSS3, JavaScript (ES6+)

Frontend Web Application

[Project Link](#)

- Engineered a highly responsive, framework-less, browser-based management portal utilizing vanilla HTML5, CSS3, and dynamic modern JavaScript.
- Implemented complex DOM manipulation mechanisms and real-time form validation engines to ensure seamless data updates.
- Structured structured local data models into clean, interactive tabular views with an emphasis on intuitive user experience and accessible UI architecture.

GEBEYA Printing & Advertising

HTML5, CSS3, JavaScript, Responsive Design

Commercial Landing Page

[Project Link](#)

- Developed a bilingual (English and Amharic) corporate landing page using professional, brand-consistent layouts.
- Built an integrated commercial services listing complete with localized Ethiopian Birr (ETB) dynamic pricing matrices and customized input validation for contact flows.
- Utilized mobile-first media query strategies to ensure pixel-perfect fidelity across standard desktop monitors and smartphone viewports.

Weather Application

React.js, JavaScript, REST API, OpenWeatherMap API

Frontend Web Application

[Project Link](#)

- Built a real-time responsive dashboard connecting directly to third-party REST APIs via advanced asynchronous fetch sequences.
- Programmed a city-based query engine capable of mapping JSON structures to dynamic UI components detailing precise indices for temperature, humidity, and forecast patterns.
- Formulated programmatic promise rejection catchers and user-friendly structural error banners to maintain application integrity during network disruptions or invalid inputs.

ACTIVITIES & LEADERSHIP

Group Project Lead — Network Architecture Design

Wachemo University

Data Communication & Computer Networks

May 2026

- Directed a 4-member technical engineering group tasked with designing and deploying a secure, VLAN-segmented corporate infrastructure model inside Cisco Packet Tracer.
- Configured secure inter-VLAN routing patterns using a Router-on-a-Stick methodology alongside active DHCP relay agents.
- Hardened infrastructure safety boundaries by embedding port security constraints (Sticky MAC addressing) and smart IoT environment automation metrics.

Collaborative Developer — Database Systems Technical Report

Wachemo University

Database Systems Departmental Project

May 2026

- Co-authored a formal technical analysis blueprint detailing SQL Server Triggers architecture, focusing comprehensively on DML and DDL transactional operations.
- Engineered exact database behavioral simulations and curated structural code blocks documenting shadow paging mechanics and relational recovery sequences.

EDUCATION

BSc in Computer Science

Hossana, Ethiopia

Wachemo University

Expected Graduation: 2028

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), SQL, HTML5, CSS3, Java
Frontend:	React.js, Bootstrap, Dynamic DOM Manipulation, Responsive Design, CSS Media Queries
Backend:	Node.js, Express.js, RESTful APIs, Middleware Configuration, Routing
Databases:	MySQL, Microsoft SQL Server, Shadow Paging & Transaction Recovery
Tools:	Git, GitHub, npm, VS Code, XAMPP, Cisco Packet Tracer

CORE COMPETENCIES

- | | |
|--|---|
| • Full-Stack Software Architecture | • Agile Team Collaboration & Coordination |
| • Programmatic Debugging & Problem Solving | • Advanced Technical Documentation Rendering |
| • RESTful API Integration & Security Mapping | • Self-Directed Continuous Engineering Research |
